Hiring Team
Schonfeld Strategic Advisors
Hong Kong SAR

Dear Hiring Manager,

I am applying for **Trading Assistant** with Schonfeld Strategic Advisors in Hong Kong SAR. I've thrived in high stakes, delivery focused environments from HKMA production paths to Universal Innotech's BFSI tooling, where accuracy on recurring workflows matters as much as speed.

You're hiring someone who builds Python-backed dashboards and automation, leans on Tableau or Power BI style reporting, and folds AI into repeatable analysis beside traders and portfolio managers. That's the lane I've been building toward across recent roles.

- **HKMA reporting stack:** I ship Grafana-backed observability on RAG pipelines over about 10,000 PDFs with SQL vector retrieval, Tableau and Power BI dashboards with the Product Owner, and an agentic firewall review loop that removes about 30 hours/month of manual security checks before approvals reach downstream teams.
- **Universal finance-grade pipelines:** I automated AML and PEP workflows with Neo4j graph APIs and Python scraping that saved HK\$ 10,000+/month in Open Sanction fees and ran validated Python ETL across 50,000+ records per cycle so report turnaround dropped from about two days to about two hours under ops scrutiny.
- **Jay Cee Ess analytics cadence:** I anchored tracking beside about AUD 100,000/month revenue context after rebuilding the funnel, cut cart abandonment about 70% with Stripe plus wallet flows, and cut price lookup latency about 99% using Redis-backed routing tests ahead of each release when volatility spikes demand fast answers.

I'd welcome the chance to bring that toolkit to Schonfeld's front-office desk while I deepen APAC market fluency beside your traders.

Warm Regards,

Syed Ayan Ali
