Hiring Team
Schonfeld Strategic Advisors
Hong Kong, Hong Kong SAR

Dear Hiring Manager,

I am applying for **Trading Assistant** with Schonfeld in Hong Kong, Hong Kong SAR. Busy desks pair Python tooling with Tableau or Power BI stories and calm follow-through whenever brokers shorten their deadlines.

You emphasized Python dashboards, attentive detail on reconciliations, and AI routines that tighten insight while Portfolio Finance, Operations, and Compliance stay aligned on the same checkpoints. HKMA blended those habits with Grafana, JIRA, Next.js workflows, Scrum owners, plus L3 vigilance whenever automation jittered Outlook assistant traffic.

I've thrived in high stakes delivery focused rotations where sloppy detail echoes, so I treat each dataset like a downstream booking control.

- **HKMA reporting loops:** Tableau and Power BI packs anchored Product Owner demos while Grafana and SQL-backed retrieval covered about 10,000 PDF ingestion paths; firewall automation saved about 30 hours monthly via JIRA, Next.js, and OPA; I troubleshoot Outlook assistant regressions inside scrum rotations.
- **Universal financial data:** I removed about HK\$10,000 in recurring AML API bills with Neo4j graphs and Python scraping, ran Python ETL over more than 50,000 records each cycle to cut turnaround from about two days to about two hours, and sped broker decisions about 30% with REST plus Neo4j relationship screens.
- **Jay Cee Ess throughput:** I read funnel telemetry beside about AUD 100,000 monthly revenue context, trimmed checkout abandonment about 70% via Stripe wallets, and shaved price lookups about 99% with Redis-heavy routing proofs pre-launch.

I'll bring Python, SQL, Tableau, Power BI, and Grafana-informed automation rooted in meticulous validation.

Warm Regards,

Syed Ayan Ali
