Hiring Team  
Creaxon Technologies Inc. Limited  
Hong Kong SAR

Dear Hiring Manager,

I am applying for **Software Engineer** with Creaxon Technologies Inc. Limited in Hong Kong SAR. I've shipped in HKMA style delivery where production risk is real and you still own the outcome after merge. I want that same discipline on product work that blends Node, tests, rollout, and live support.

You're hiring for engineers who live across build, test, maintenance, and research into safer tools. That's my lane lately. I stay steady when a chart turns red and I'm used to scrum with product owners plus L3 calls when production bites.

- **HKMA delivery and observability:** I ship Next.js with JIRA and OPA hooks, Python services behind RAG on about 10,000 PDFs, SQL vector search, and Grafana dashboards while I run ceremonies with the product owner and handle L3 when alarms fire.
- **Jay Cee Ess revenue and latency:** I rebuilt a legacy funnel that sat next to about AUD 100,000 monthly revenue context, cut cart abandonment about 70% after Stripe plus wallet checkouts, and cut price lookup latency about 99% with Redis routing and integration tests before each release.
- **Universal Innotech cost and cycle time:** I removed about HK\$10,000 in recurring AML API fees using Neo4j graphs and Python scraping, and I ran Python ETL across more than 50,000 records per cycle so report prep dropped from about two days to about two hours with validation on every batch.

I'm strongest in JavaScript, TypeScript, Node.js, Next.js, React, Python, and SQL. Happy to talk through how I bring calm delivery into your team.

Warm Regards,

Syed Ayan Ali
